

AMENDMENTS TO THE CLAIMS:

Claim 4 is canceled. Please replace the claims with the claims provided in the listing below wherein status, amendments, additions and cancellations are indicated.

1. (Second Amended) A cap comprising;

a cloth cap body;

a sunshade cover removably and rotatably connected to said cap body by means for connecting, characterized in that the sunshade cover has a cooling material, and the cooling materials is a water-absorbing material as a fiber obtained by processing a polymer that contains the sodium salt of polyacrylic acid as a major component;[capable of putting into the cloth cap body when in not use, having material for cooling, capable of exposing the top of a wearer's head to the outside of the hat body when the shading cover is stored in the hat body and cooling the back part of the head and nape of the wearer when the cover is used for shading, capable of storing or extracting the shading cover into/out of the hat body by turning the shading cover so that one of a front and rear surfaces of the cover is flush with the surface of the wear's head]

the connecting means [having an axle provided at a connected portion of one of the cloth cap body and the sunshade cover.] has a male piece and a female piece respectively on the cap body and the sunshade cover, wherein the male piece has a projection portion rotatably and removably attached to a recess of the female portion

such that the top of a wearer's head to the outside of the hat body is exposed when the shading cover is rotated to be stored in the hat body, and the back part of the head and nape of the wearer is cooled when the cover is rotated out of the hat body so that one of a front and rear surfaces of the cover is flush with the surface of the wear's head.

2. (Second Amended) A cap according to claim 1 wherein the connecting means is a stopper pin as the axle thereof so as to provide the sunshade cover to the cap body removably and [.] pivotably [moving] such that the top of a wearer's head to the outside of the hat body is exposed when the shading cover is rotated to be stored in the hat body, and the back part of the head and nape of the wearer is cooled when the cover is rotated out of the hat body so that one of a front and rear surfaces of the cover is flush with the surface of the wear's head.

3. (Second Amended) A cap comprising;

a cloth cap body;

a sunshade cover removably and rotatably connected to said cap body by means for connecting, [capable of putting into the cloth cap body when in not use, having material for cooling;] , characterized in that the sunshade cover has a cooling material, and the cooling materials is a water-absorbing material as a fiber obtained by processing a polymer that contains the sodium salt of polyacrylic acid as a major component; and

b2
c/

the connecting means [comprising both-sided hook and loop provided so as to store and extract the sunshade cover into/out of the hat body by turning the shading cover so that one of a front and rear surfaces of the cover is flush with the surface of the wear's head.] has a both-sided hook and a loop respectively on the cap body and the sunshade cover, such that the top of a wearer's head to the outside of the hat body is exposed when the shading cover is rotated to be stored in the hat body, and the back part of the head and nape of the wearer is cooled when the cover is rotated out of the hat body so that one of a front and rear surfaces of the cover is flush with the surface of the wear's head.

7. (Amended) A cap according to any claim 1[,] or 3 [or 4], wherein the cap body is formed in a headband with elasticity.
